molecular lab

Additional MRI
and CT scanners

Opens 2023

Opens next year

Opens August this year

£6m

Small
schemes

£1.6m

Maintenance

£1.2m

Ward
upgrades

These upcoming developments at Ipswich Hospital are part of a development programme across our hospital sites totalling **£100million** over five years.

Main entrance and retail area

Part of £23.1m project

- We are creating a spacious and welcoming main entrance close to most of our wards
- A selection of new shops to be announced soon

Opens
Autumn
this year

Opens
2023

Urgent Treatment Centre and Emergency Department

Part of £23.1m project

- A new dedicated Urgent Treatment Centre (UTC) next door to a new Emergency Department (ED)
- The UTC will offer treatment for a range of urgent but not life-threatening conditions, freeing up the ED to focus on providing care for the most critically ill and seriously injured patients
- A single front door for all walk-in urgent and emergency patients, making sure they are seen and treated by the right team
- With hospital specialists working alongside primary care clinicians
- The build will include a new CT scanner which is part of an additional £3.2million investment in diagnostic technology (also includes a new MRI scanner now in place in our Diagnostic Imaging department)

This development will also pave the way for a new musculoskeletal department.

A new suite of musculoskeletal services will be created by bringing together Rheumatology, Spinal Services and Trauma and Orthopaedics all under one roof – putting all our specialists in one place.

It will provide a better environment for patients and staff in our landmark Garrett Anderson Centre.

Opens
later this
year

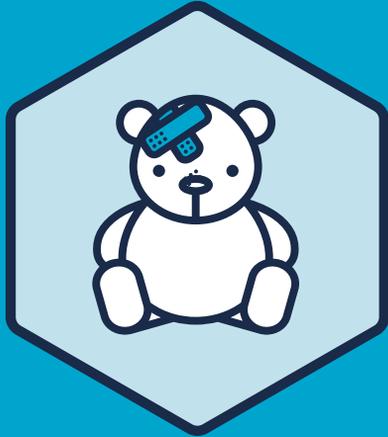

Surgical Assessment Unit

Part of £23.1m project

- We are redesigning a surgical ward as a new, specialist Surgical Assessment Unit
- The unit will reduce unnecessary hospital admissions and help patients get home sooner
- Improved patient experience and a better environment for patients and staff
- Building on the success of our existing Emergency Assessment Unit

Opens
2023

Children's department

£6.9 million

- We are completely remodelling and refurbishing the department to create a child-friendly environment fit for the 21st century
- Increasing beds, isolation cubicles and clinic rooms, plus a high dependency area and break-out play areas
- Dedicated areas for patients who need physiotherapy or have diabetes or cystic fibrosis
- Funded in partnership with the Colchester & Ipswich Hospitals Charity

Opens
next
year

Breast Care Centre

£5.3million

- We are building a new £5.3million state-of-the-art Breast Care Centre to bring together all elements of Breast Care under one roof – the clinic, the imaging department and breast screening
- This will make visits easier for our patients
- Funded in partnership with the Colchester & Ipswich Hospitals Charity

Opens
August
2021

Pathology molecular lab

£5.3million

- The lab will be a key part of our response to COVID-19
- It will also give us a modern diagnostic toolkit for tests ranging from flu and MRSA to rapid cancer tests for years to come
- Quicker diagnostics will allow our clinical teams to treat patients more quickly
